

Estanterías y Racks

Estanterías metálicas para uso industrial. Satisfacen cualquier necesidad de almacenamiento. Selectivo, penetrable, dinámico, push back o tipo Cantilever.

Racks Selectivos

Este sistema permite el acceso directo al 100% de los pallets, por lo que es el sistema mas efectivo y flexible para el almacenamiento de productos variados. Otorga una gran visibilidad a todos los pallets.

Permite además utilizar diferentes alturas de vigas, dependiendo de las dimensiones de los pallets o cargas a almacenar.

Pueden ser usados como estanterías de doble profundidad para almacenar un pallet delante de otro y poder incrementar la capacidad de almacenaje.

Racks Penetrables Drive in-Drive Through

Este sistema permite un gran aprovechamiento del espacio horizontal y en altura.

Es posible utilizarlo con una entrada (drive-in) o dos (drive-through).

Se eliminan calles y pasillos, por lo que es muy utilizado en cámaras frigoríficas y donde es imprescindible un buen uso del espacio.

CARACTERISTICAS RACKS SELECTIVOS

NORMAS DE SEGURIDAD:

Cumple con todas las normas internacionales de seguridad

FABRICACIÓN SEGÚN
NORMAS ISO 9002.

SECCION DE BASTIDORES

OPCIONALES:

Defensas de Bastidores por unidad -

Ancho de la "U" 1000 mm, contruidos en Caño soldados con placas para Brocar, color naranja / azul

Defensas de Columnas de Bastidores

Construidos en Chapa plegada con placas para Brocar, de altura 300mm

Defensas de Columnas de Bastidores

Construidos en perfilería con placas para Brocar, de altura 300mm

Separadores entre bastidor:

Puentes aéreos:

CARACTERISTICAS TECNICAS:

Columnas de sección omega, de un sólo tramo, con regulación en altura cada 33 mm.

Largueros de bajo perfil, para lograr mayor espacio útil en altura, según carga y tipo.

Columnas, largueros, uniones, ménsulas y demás elementos están realizados en chapa perfilada.

Terminación: pintura horneada.

NO SE INCLUYE

- ✓ La nivelación de pisos y/o paredes fuera de escuadra.

Company Introduction

Nanjing Inform Storage Equipment Co.,LTD (Stock Code:603066) was successfully to be a public company of Shanghai A Shares on 11th, June, 2015.

INFORM is focused on the various kinds of precious racking and intelligence robots for automatic storage & the cloud softer ware system, offering customers the intelligent storage solutions with "Robot & Racking" to meet the different requirements throughout the production & storage processes.

There are 4 factories in our company, and we spent heavily to import the most advanced full-automatic racking production lines in the world, it is symbolized the top level technology and equipments of the racking.

The products are sold to domestic and overseas, we have been completed more than 10,000 warehouses, the products are widely used in various industries.

INFORM always insists integration of Industry-Academia-Research with an advanced R & D team to offer the professional intelligent storage solutions. We have 41 patents and 14 software copyrights, 3 products are regards as the High-Tech of Jiangsu Province, leading to participate in 6 items of national standard, 13 items of industrial standard, and publishing 3books for racking industry.

INFORM is continuously guided with the core value of "Passion, Innovation, Harmonious" to outlook the industry tendency and explore the industry needs, injecting new vitality to the storage industry by technology innovation and model innovation.

Recognition

- ISO 14001 Certificate
- ISO 9001 Certificate
- CE for Automatic equipments
- CE for Racking
- China Top Brand
- BV Certificate
- National innovation company
- China well-known trademark

- 4 1 Patents
- 6 National Standards
- 13 Industry Standards
- 3 industry Books publication

Factory

- Nanjing 1# factory, 40020 m²
- Nanjing 2# factory, 74000 m²
- Tianjin 3# factory, 27000 m²
- Chongqing 4# factory, 37000 m²

Manufacturing

■ Quality stem from sophisticated equipments :

INFORM has made huge investment by importing fully automatic racking manufacturing lines from Europe, which guarante high precision, length tolerance 1mm/15m, dimensional tolerance within $\pm 0.2\text{mm}$

■ Quality stem from scientific Managment :

adopt ERP managment system, realize purchase,production information in stream line

Boltless Shelving

- Boltless shelving consists of posts, connect beams, top brackets, middle brackets and panels.
- For manual loading and unloading
- Loading capacity 200-400Kg/level
- Standard size and load capacity

Length	Depth			
	400MM	450MM	500MM	600MM
1200mm	300KG	300KG	300KG	300KG
1500mm	250KG	250KG	250KG	250KG
1800mm	200KG	200KG	200KG	200KG

Medium Duty Longspan Shelving

- Longspan shelving consists of frames, beams and panels.
- For manual loading and unloading
- Loading capacity 200-800Kg/level
- It can be used in multi-tier shelving
- Step beam

Item	Section size mm	Length of Beam						
		1000mm kg/pair	1200mm kg/pair	1500mm kg/pair	1800mm kg/pair	2000mm kg/pair	2400mm kg/pair	2700mm kg/pair
Step beam	50x30x1.0	607	492	315	219	177	123	97
	50x30x1.5	800	706	452	314	254	176	139
	60x40x1.0	800	800	607	422	341	237	187
	60x40x1.5	800	800	800	612	495	344	272
	80x50x1.5	1000	1000	1000	1000	1000	808	639

- Frame Height = 1800/2000/2500/3000mm
- Frame Depth = 400/500/600/700/800mm

Selective Pallet Racking

- Selective pallet racking consists of frames, beams and some accessories.
- Load capacity 2000kg -- 4000kg / level
- Working with forklifts

■ Accessories

Selective Pallet Racking

■ Load capacity chart of beams for SPR

■ Beam

■ Upright

Shuttle Racking

Shuttle racking works with shuttle carts and forklifts.

It's a high density storage system.

Advantage is High efficiency, safe, maximize use of warehouse, flexible operation, first in first out(FIFO) and first in last out(FILO).

Such system is suitable for industries like food, chemical, tobacco, beverage, which are with high volume but few types of goods.

Drive-in Racking

■ Drive-in Racking: the forklift need go into the racking structure to load or unload the pallet, after that, the forklift need move back out.

■ Advantage: Lower cost. Comparing with selective pallet racking, 80% of storage space will be utilized. Warehouse space utilization rate can be increased by 40%

■ It widely used for storage of big batch and less variety with same package. Such as food, tobacco and freezer.

Push Back Racking

- Push back rack: consists of uprights, beams, support rails, loading cars.
- Comparing with pallet racking, storage capacity increased by 40%;

Cantilever Racking

- Ideal for long and bulky items such as pipes, tubing, timber and furniture.

Carton Flow Racking

- Carton flow rack consists of rollers, frames, beams, rails. Goods move under gravity, from one to the other end on roller.
- Advantage is first in first out(FIFO), lower cost, fast storage speed and high density.
- It is widely used in supermarket, pharmaceutical, chemical and electronics industries

Logistic Equipments
